irrigation. It is provided with a washing machine inside the coupling that does an excellent job in preventing losses, even if I chose to replace it with one of these Gilmour rubber slices. The instructions include a small planning table to help you arrange which areas and cycles continue when and how long; I suggest you Use it. Note: Instructions have been updated since I received the four-zone hydrological timer; Now there is a section that mentions possible valve problems and suggests that removing and replacing the valve will solve the problem. Once the timer works properly, it works reliably - mine is running for a year without problems. A week later I received an email from the company with a solution to the problem (see above). I finally learned from Melnor that the valves are magnetically held together. During transit / shipping, vibrations can cause some valves to open and stay open. There is also an optional humidity sensor that can turn off or delay irrigation up to 7 days based on soil moisture levels. One of my biggest frustrations as a gardener in the south-west arid desert found an automated water timer to run the four irrigation areas set up in the back yard. The 4 valve system is the best I found to connect and control more irrigation systems. Each drip zone irrigates different plants with very different humidity requirements, so the areas must turn on and off at different frequencies and for different lengths of time. If your bolt is blinded or not firmly attached, consider it stabilizing before attacking the timer. Installation of the Melnor hydrological timer Installing the timer is quite simple - just connect it to the edge. If this does not work, use the Manual function to open and close the valve three times. times.

Habitech 3-Pack 1/2 Inch Drip Irrigation Tubing to Faucet/Garden Hose Adapter - Reusable Connector Fittings for Most Rain Bird, Orbit, Dig, Toro 1/2 or 5/8 Tubing x 3/4" FHT ...
